Professional Summary

Results-driven Cloud DevOps Engineer with 3+ years of experience in AWS cloud infrastructure, CI/CD pipeline implementation, and container orchestration using Kubernetes (EKS). Expertise in Terraform, Jenkins, Docker, Helm, Ansible, and Linux to build secure, scalable, and highly available systems. AWS Certified Solutions Architect (SAA-C03) and Azure Administrator (AZ-104) with hands-on DevSecOps experience, focused on delivering operational excellence through Infrastructure as Code (IaC) and Agile practices.

Technical Skills

- **Cloud Technologies:** AWS (EC2, S3, IAM, VPC, Lambda, SNS, CloudTrail, ASG, ELB, Route 53, RDS, EKS), Microsoft Azure
- **Infrastructure as Code (IaC):** Terraform
- **Version Control:** Git, GitHub
- **Containerization & Orchestration:** Docker, Kubernetes, Helm
- **CI/CD Tools:** Jenkins, Azure DevOps
- **Programming Languages:** Shell Scripting, Python (Boto3)
- **Security Tools:** SonarQube, OWASP DC
- **Monitoring Tools:** Prometheus, Grafana, AWS CloudWatch

Certifications

- AWS Certified Solutions Architect – Associate (SAA-C03)
- Microsoft Certified Azure Administrator – Associate (AZ-104)
- Microsoft Azure Fundamentals (AZ-900)
- Microsoft Certified: Power BI Data Analyst Associate (PL-300)

Work Experience

Cognizant Technology Solutions Corporation (CTS) – DevOps Engineer (Associate)
Jan 2023 – Present

- Architected and managed scalable **AWS** cloud infrastructure to support business-critical applications.
- Automated infrastructure provisioning using **Terraform** and **Jenkins CI/CD pipelines**, reducing deployment time by **60**% and eliminating configuration errors across **DEV, QA, UAT**, and **PROD** environments.
- Deployed and managed microservices on **Kubernetes** (**EKS**) clusters using **Helm** charts, ensuring consistent and reliable application delivery.
- Proficient in AWS Cloud platform and its features which includes **EC2, S3, IAM, EBS, VPC, Subnets, Auto scaling, RDS, Route 53, Security Groups** and **SNS**.
- Integrated **SonarQube** static code analysis and enforced quality gates prior to artifact promotion via Nexus, improving code quality standards.
- Developed **Python** (**Boto3**) automation scripts for AWS cost optimization, achieving a 20% reduction in cloud infrastructure spend.
- Monitored system health and resolved incidents using AWS **CloudWatch** and **Prometheus**/**Grafana**, improving overall system reliability.

Projects

1. **Project : RBC Bank (Banking Domain)**

• **Problem:** Infrastructure inconsistencies and slow provisioning were impacting release velocity.

• **Action**: Developed reusable Terraform modules for VPC, EKS, ALB, and IAM resources to standardize infrastructure provisioning across environments.

• **Result**:

- Reduced configuration drift by 80% and accelerated environment setup time by 70%.
- Streamlined CI/CD pipelines using Jenkins, Git, Maven, Nexus, and Docker, cutting build-to-deploy cycle by 60%.
- Enforced Kubernetes RBAC, HPA, and Auto Scaling to support high transaction loads, achieving 99.9% uptime.
- Designed Blue-Green and Rolling deployments enabling zero-downtime releases.
- Configured CloudWatch with SNS alerts, significantly reducing MTTR.
- Established Terraform remote backend using S3 and DynamoDB for secure state management and team collaboration.
- Created Terraform workspaces for Dev, QA, and Prod to ensure proper environment isolation.
- Integrated SonarQube and security scanning tools into CI/CD pipelines to improve code quality and security compliance.
- Configured IAM roles and policies based on least privilege principles to strengthen cloud security.
- Set up RDS Multi-AZ deployment to ensure high availability and disaster recovery capability.
- Designed a resource tagging strategy to improve cost visibility and governance.

2. **Project : American International Group (AIG) (Insurance Domain)**

• **Problem:** Manual infrastructure provisioning and inconsistent multi-environment setups caused deployment delays.

• **Action**: Built modular Terraform architecture with reusable modules for networking, EKS clusters, and security configurations.

• **Result**:

- Improved multi-environment consistency by 75%, reduced manual provisioning errors by 50%, and accelerated release cycles by 40%.
- Deployed microservices on EKS using Helm with readiness/liveness probes and rolling updates.
- Built Prometheus and Grafana dashboards improving observability and proactive monitoring.
- Provisioned Terraform remote backend for secure multi-user infrastructure deployments.
- Integrated AWS Secrets Manager for secure storage of application secrets and credentials.
- Configured Horizontal Pod AutoScaler (HPA) based on CPU and memory metrics for automatic scaling.
- Applied Kubernetes Network Policies to enhance cluster-level security.
- Integrated Alertmanager with Prometheus for automated production alert notifications.
- Automated EBS snapshot backups to ensure data protection and business continuity.
- Adopted rolling and canary deployment strategies to reduce release risk.
- Created environment-specific Helm values files to maintain deployment consistency across environment.

Education

- **Bachelor of Engineering** - Computer Science and Engineering - SGBAU
  Prof. Ram Meghe Institute of Technology & Research – Amravati, IN
  Graduated: May 2022 CGPA: 9.59

Honors & Awards

- **Academic Merit Award:** Recognized for securing a spot in the top 15 of the Computer Engineering Department.
- **Cognizant Appreciation Award** - Awarded for exemplary contribution to project delivery (2024, 2025).
- **Cognizant Applause Award** - Honored for exceptional dedication to meet critical project deadlines.
